

## University of Waterloo Weather Station Summary - September 2011

### **Another hot month with average precipitation**

With an average temperature that was 1.8 degrees above average, September was the third hotter than average month in a row. But it certainly wasn't consistent warm as the month was a battle between the cold arctic air masses and hotter air from the south. As a result we saw some drastic temperature changes such as a high of 30.5 C on the third and then a high of only 15.5 C two days later.

The precipitation for September was within the average range (95.3 mm compared to an average of 87.5 mm) even though there were 17 days with some measured precipitation, which is more than the average of 12. There were a couple of days with over 20 mm (the 19th and 27th) while the rest of it was spread over many days with a bit of precipitation here and there.

The total precipitation at the end of September is 799.3 mm, which is still above the average of 680.7 mm for the end of the month.

Summary for September 2011:

Maximum Temperature 30.5°C

Minimum Temperature 3.5°C

Average Daily High Temperature 20.8°C (Long term average 20.0°C)

Average Daily Low Temperature 11.1°C (Long term average 8.3°C)

Total Precipitation 95.3 mm (Long term average 87.5 mm)

(Long term averages based on 1971-2000 data for the Waterloo Wellington Airport)
