

## University of Waterloo Weather Station Summary – May 2014

### **May was just within the average range for both temperature and precipitation**

The daily high temperatures of May were just a little below average while the daily low temperatures were 1.4 degrees higher than average. As a result, the overall temperature was higher than average for the first time in 6 months (but as it was only 0.6 degrees above, it was still within the average range).

Also on the edge of the average range was the precipitation (63.6 mm) for the month, but this time on the low end of the range. About 40 mm of this precipitation came down between the 13<sup>th</sup> and the 15<sup>th</sup> while hardly any fell after the 21<sup>st</sup>.

So far this year we have seen 276.7 mm of precipitation which is below the average of 340.2 mm.

Summary for May 2014:

Maximum Temperature 28.1°C

Minimum Temperature 1.7°C

Average Daily High Temperature 18.8°C (Long term average 18.9°C)

Average Daily Low Temperature 8.0°C (Long term average 6.6°C)

Total Precipitation 63.7 mm (Long term average 75.7 mm)

(Long term averages based on 1971-2000 data for the Waterloo Wellington Airport)
