

University of Waterloo Weather Station Summary – December 2020

A warm December with average precipitation

With the only cold streak lasting just a few days in the middle of the month, it is not surprising that overall temperature was 1.7 degrees warmer than average. This now makes 6 of the last 7 Decembers that have been warmer than average

There wasn't much precipitation in the first 3 weeks of the month, but a wet last week put the total of 64.4 mm close to the average of 71.2 mm.

December saw 44.5 cm of snow, a little more than the average of 37.2 cm for the month.

Summary for December 2020:

Maximum Temperature 9.3°C

Minimum Temperature -11.4°C

Average Daily High Temperature 1.5°C (Long term average 0.2°C)

Average Daily Low Temperature -4.6°C (Long term average -6.8°C)

Total Precipitation 64.4 mm (Long term average 71.2 mm)

(Long term averages based on 1981-2010 data for the Waterloo-Wellington Airport)
