

## University of Waterloo Weather Station Summary – November 2021

### **A dry November with average temperature**

Not really that much to say about the temperature during the month of November. Although there were a few warm days, these were offset by many days that were a few degrees cooler than average. Put all that together and you get an overall temperature 0.4 degrees above average, but still within the average range.

The precipitation didn't really start until almost 2 weeks into the month, and even after that there were no days with over 10 mm of precipitation. This resulted in the total precipitation of 51.6 mm being well below the average of 87.1 mm, and the driest November in the last 8 years.

Even with this dry month, the total precipitation of 950.5 mm remains well above the average for this time of year of 832.9 mm. While the total snowfall of 17.5 cm was a bit more than the average of 13 cm for November.

Summary for November 2021:

Maximum Temperature 18.8°C

Minimum Temperature -9.3°C

Average Daily High Temperature 7.0°C (Long term average 6.3°C)

Average Daily Low Temperature -1.4°C (Long term average -1.4°C)

Total Precipitation 51.6 mm (Long term average 87.1 mm)

(Long term averages based on 1981-2010 data for the Waterloo-Wellington Airport)
