

Eric Soulis Memorial Weather Station Summary – November 2023

An average November for both temperature and precipitation

With just a few warm days in the middle of the month surrounded by days that were generally at or just below average, this resulted in an overall temperature that was 0.7 degrees below average. However this just squeaks it into the average temperature range for the month.

Precipitation was pretty steady throughout the month, with no really wet single days and a 10 day dry period. The final total of 56.2 mm was close to the average for November of 64.5 mm. The total snowfall of 6.0 cm was about half the average of 13 cm.

With this average month, the total precipitation for the year of 880.2 mm is still above the average of 832.9 mm.

Look for a new innovation in reporting how severe and how “dreary” the month and season has been starting in the new year.

Summary for November 2023:

Maximum Temperature 15.4°C

Minimum Temperature -8.1°C

Average Daily High Temperature 7.0°C (Long term average 7.2°C)

Average Daily Low Temperature -2.0°C (Long term average -0.8°C)

Total Precipitation 56.2 mm (Long term average 64.5 mm)

(Long term averages based on 1998-2022 data from the Soulis Memorial Weather Station at the University of Waterloo)
