

It was good, but I would have liked a few days over 30 and a little less rain.

Comments:

Important that I did not vacation in this country. It was good sleeping weather & not humid but a few more days over 30 would have been great!

Good for gardens & lawns

Our flowers have never looked so good.

Great for the garden and didn't need to run the cooling system too much.

Yes, for me personally - I liked less humid days BUT I feel for the farmers who didn't get the usual needed heat units to develop the crops (I sweeten the corn, tomatoes & peaches! P.S. The last 2 weeks (Sept 1-19) were good for farmers' (& us). - not so much lawn to mow! Broccoli, etc & cukes were in their prime this summer!

Air Quality was better.

July should have been renamed the month of RAIN!

Good for vegs, but tomatoes need hot July nights
I like it HOT!!

Good for potted plants

I wish there were more swimming days. Could have been somewhat warmer in May, but this was a relief after several years of extreme heat & humidity.

I didn't miss the humanity. September is making up for it though!

It got better

It got pretty good in the last half of August, but there was too much rain before then. A few hot days would have been good, too, so it would have felt like summer.
